nonmaterial non- conformities or omissions in the Tender related to documentation requirements. Requesting information or documentation on such non-conformities shall not be related to any aspect of the price of the Tender. Failure of the Tenderer to comply with the request may result in the rejection of its Tender.

31.7 Provided that a Tender is substantially responsive, the Procuring Entity shall rectify quantifiable nonmaterial non-conformities related to the Tender Price. To this effect, the Tender Price shall be adjusted, for comparison purposes only, to reflect the price of a missing or non-conforming item or component in the manner specified in the TDS.

Otherwise, if not so stated, the invitation will be open to all tenderers.

35 Evaluation of Tenders

35.1 The Procuring Entity shall use the criteria and methodologies listed in this ITT and Section III, Evaluation and Qualification Criteria. No other evaluation criteria or methodologies shall be permitted. By applying the criteria and methodologies, the Procuring Entity shall determine the Best Evaluated Tender. This is the Tender of the Tenderer that meets the qualification criteria and whose Tender has been determined to be:

- a) Substantially responsive to the tendering document; and
- b) The lowest evaluated cost.

35.2 In evaluating the Tenders, the Procuring Entity will determine for each Tender the evaluated Tender cost by adjusting the Tender price as follows:

37 Abnormally Low Tenders and Abnormally High Tenders Abnormally Low Tenders

37.1 An Abnormally Low Tender is one where the Tender price, in combination with other elements of the Tender, appears so low that it raises material concerns as to the capability of the Tenderer in regards to the Tenderer's ability to perform the Contract for the offered Tender Price.

37.2 In the event of identification of a potentially Abnormally Low Tender, the Procuring Entity shall seek written clarifications from the Tenderer, including detailed price analyses of its Tender price in relation to the subject matter of the contract, scope, proposed methodology, schedule, allocation of risks and responsibilities and any other requirements of the Tender document.

37.3 After evaluation of the price analyses, in the event that the Procuring Entity determines that the Tenderer has failed to demonstrate its capability to perform the Contract for the offered Tender Price, the Procuring Entity shall reject the Tender.

Abnormally High Tenders

37.4 An abnormally high price is one where the tender price, in combination with other constituent elements of the Tender, appears unreasonably too high to the extent that the Procuring Entity is concerned that it (the Procuring Entity) may not be getting value for money or it may be paying too high a price for the contract compared with market prices or that genuine competition between Tenderers is compromised.

37.5 In case of an abnormally high price, the Procuring Entity shall make a survey of the market prices, check if the estimated cost of the contract is correct and review the Tender Documents to check if the specifications, scope of work and conditions of contract are contributory to the abnormally high tenders. The Procuring Entity may also seek written clarification from the tenderer on the reason for the high tender price. The Procuring Entity shall proceed as follows:

- i) If the tender price is abnormally high based on wrong estimated cost of the contract, the Procuring Entity may accept or not accept the tender depending on the Procuring Entity's budget considerations.
- ii) If specifications, scope of work and/or conditions of contract are contributory to the abnormally high tender prices, the Procuring Entity shall reject all tenders and may retender for the contract based on revised estimates, specifications, scope of work and conditions of contract, as the case maybe.

37.6 If the Procuring Entity determines that the Tender Price is abnormally too high because genuine competition between tenderers is compromised (often due to collusion, corruption or other manipulations), the Procuring Entity shall reject all Tenders and shall institute or cause competent Government Agencies to institute an investigation on the cause of the compromise, before retendering.

38 Unbalanced and/or Front-Loaded Tenders

- 38.1 If in the Procuring Entity's opinion, the Tender that is evaluated as the lowest evaluated price is seriously unbalanced and/or front loaded, the Procuring Entity may require the Tenderer to provide written clarifications. Clarifications may include detailed price analyses to demonstrate the consistency of the tender prices with the scope of works, proposed methodology, schedule and any other requirements of the Tender document.
- 38.2 After the evaluation of the information and detailed price analyses presented by the Tenderer, the Procuring Entity may as appropriate:
- a) Accept the Tender; or
 - b) require that the total amount of the Performance Security be increased at the expense of the Tenderer to a level not exceeding 10% of the Contract Price; or
 - c) agree on a payment mode that eliminates the inherent risk of the Procuring Entity paying too much for undelivered works; or
 - d) Reject the Tender.

39 Qualification of the Tenderer

- 39.1 The Procuring Entity shall determine to its satisfaction whether the Tenderer that is selected as having submitted the lowest evaluated cost and substantially responsive Tender is eligible and meets the qualifying criteria specified in Section III, Evaluation and Qualification Criteria.
- 39.2 The determination shall be based upon an examination of the documentary evidence of the Tenderer's qualifications submitted by the Tenderer, pursuant to IIT 18. The determination shall not take into consideration the qualifications of other firms such as the Tenderer's subsidiaries, parent entities, affiliates, subcontractors or any other firm(s) different from the Tenderer that submitted the Tender.
- 39.3 An affirmative determination shall be a prerequisite for award of the Contract to the Tenderer. A negative determination shall result in disqualification of the Tender, in which event the Procuring Entity shall proceed to the Tenderer who offers a substantially responsive Tender with the next lowest evaluated cost to make a similar determination of that Tenderer's qualifications to perform satisfactorily.

40 Procuring Entity's Right to Accept Any Tender, and to Reject Any or All Tenders

- 40.1 The Procuring Entity reserves the right to accept or reject any Tender, and to annul the Tendering process and reject all Tenders at any time prior to Contract Award, without there by incurring any liability to Tenderers. Schedule 3: Thermal Power Plant Equipment

KenGen produces electricity from thermal sources at Kipevu III Diesel Power Plant in Mombasa. Kipevu III is Kenya's largest fossil-fuelled power plant, which runs on Heavy Fuel Oil (HFO) and has a contracted capacity of 115 MW. It was commissioned in 2011 and comprises seven gen-sets manufactured by the Finnish firm Wartsila, each with a capacity of 17MW.

Ngong I Phase I has 6 (850kW) Vestas turbines, Ngong I Phase II has 8 (850kW) Vestas turbines, and Ngong II has 16 (850kW) Gamesa turbines. The generators will undergo vibration analysis, while the generator-gearbox couplings will undergo on-site dynamic balancing.

Schedule 5: Training and Capacity Building

This schedule aims to enhance the technical skills of the operation and maintenance team in reliability maintenance in a three-phased accelerated technical program for three (3) years. The target is building capacity in vibration analysis to ISO Category III status through the Mobius Institute. This should entail a mixture of training methods at the site, classroom sessions, overseas exposure, and practical exposure to diverse industries. The initial training can be mainly onsite to manage costs and cover many trainees.

The service provider must submit a technical proposal and detailed training plan covering the phases with clear learning outcomes at each stage. The training and accredited certification should follow ISO 18436-2 and ISO/IEC 17024. The three-phased accelerated technical program is detailed below.

Phase 1

The trainer will purchase a handheld vibration analyzer complete with software and a training package in line with the globally known Mobius Institute vibration analysis training practice or equivalent. The trainer will offer onsite, online, and classroom training and certification programs to the Operations and Maintenance team for Category 1. The phase is the critical foundation stage, and course content and curriculum should cover one (1) year of classroom and practical demonstrations at the site. The essentials that contribute to the vibration analysis Category 1 program should entail:

- An introduction to condition monitoring and reliability improvement.
- Introduction to condition monitoring and reliability improvement
- The fundamentals of vibration
- How to collect quality data

Learners should be able to learn how to do a good rotating elements job and why it is so important to do a good and reliable job. The training and accredited certification should follow ISO 18436-2 and ISO/IEC 17024.

Key equipment to acquire for this level are:

- Handheld vibration analyzer complete with accessories. This will serve the balancing need for all rotating equipment across KenGen installations.

Phase 2

This phase will entail building capacity within the KenGen team to operate and maintain the equipment and acquire Category II vibration analysis competencies. The team should be trained to use this equipment for diverse applications in our installations. The Category II analyst training learning outcome should entail the following.

- Vibration measurement basics: sensors, mounting, locations, and collecting quality data.
- Signal processing basics: sampling, windowing, averaging, and how to set up the data collected correctly.
- Equipment fault conditions: unbalance, misalignment, bearings, resonance, etc.
- Vibration analysis techniques: spectral analysis, phase analysis, time waveform analysis.

The training and accredited certification should follow ISO 18436-2 and ISO/IEC 17024. This phase should take 1 year to complete.

Phase 3

This phase will target the leaders of the vibration analysis program and the persons within KenGen's O&M teams to be the vibration specialists. Typical learning outcomes should be:

- Advanced signal processing
- How to diagnose the widest range of fault conditions
- How to utilize all of the vibration data types
- Resonance, dynamics, modal, and ODS
- How to manage a program and lead the team

The training and accredited certification should follow ISO 18436-2 and ISO/IEC 17024. This phase will take six months and involve onsite and offsite sessions across the installations and overseas.

WORK SCHEDULES AND SPECIFICATIONS

1.0 INTRODUCTION

Vibration analysis is a powerful diagnostic tool for identifying, monitoring, and preventing mechanical failures in rotating and reciprocating machinery. Measuring and analyzing machine vibrations assists in assessing the health and performance of equipment, enabling the identification of issues and implementation of corrective actions. Since rotating and reciprocating components (e.g., motors, compressors, pumps, etc.) tend to vibrate more intensely as they age, analyzing changes in vibration can help maintenance managers monitor machine conditions in real time and proactively identify asset wear and damage.

The reliability of rotating machinery installations is an essential precondition for enhanced service life and operational dependability. Rotating elements often suffer from imbalance, which must be identified and corrected before disassembly or assembly. Several factors can contribute to imbalance when a rotor has been in service for some time, such as corrosion, wear, distortion, and deposit build-up. On-site dynamic balancing service helps balance most types of revolving machinery. It is performed without removing the rotor and taking the machine out of use; it can be performed easily in minimum time without sending it out for balance. Generally, it entails running equipment at a given speed, measuring the dynamic imbalance, and correcting via adding or removing weight. This can be achieved by making the appropriate corrections on-site using field balancing techniques.

2.0 BACKGROUND – ABOUT KENGEN

KenGen owns and operates several power plants in six operation areas: Olkaria and Eburru, Western, Kipevu, Seven Forks, Upper Tana, and Ngong. Olkaria and Eburru have five conventional power plants and twenty-one wellhead units, which provide power through geothermal sources. The Western region encompasses four hydro stations and a thermal power plant: Turkwel, Sondu Miriu, Sang'oro, Gogo, and Muhoroni Gas Turbine. The Eastern Region has five power plants along the Tana River: Masinga, Kamburu, Gitaru, Kindaruma, and Kiambere. The Upper Tana area comprises four power plants: Mesco, Wanjii, Sagana, and Tana. The Kipevu area entails two thermal plants, while Ngong wind farms are in three phases comprising thirty units of 850kW each.

These power plants have various mechanical systems that experience faults or failures that negatively impact the residual life of installations, such as steam turbines, fans, and motors. These failures impact the projected Return on Invested Capital (ROIC) and bottom line through increased operation, maintenance, and equipment replacement costs.

Notably, KenGen has not exploited this aspect in its vast installations. In addition, the operation and maintenance team on the ground is not well equipped with the requisite equipment, skills, and knowledge in vibration analysis and dynamic balancing of rotating machinery. This presents a great opportunity for Maintenance Reliability Transformation in KenGen's generation fleet by stopping or minimizing equipment failures related to the effects of vibrations.

3.0 SCOPE OF WORK

Where:

P_c is the adjustment factor for the portion of the Contract Price payable in a specific currency “c”.

A_c , B_c and C_c are coefficients specified in the SCC, representing: A_c the non-adjustable portion; B_c the adjustable portion relative to labor costs and C_c the adjustable portion for other inputs, of the Contract Price payable in that specific currency “c”; and

L_{mc} is the index prevailing at the first day of the month of the corresponding invoiced at and L_{oc} is the index prevailing 28 days before Tender opening for labor; both in the specific currency “c”.

I_{mc} is the index prevailing at the first day of the month of the corresponding invoice date and I_{oc} is the index prevailing 28 days before Tender opening for other inputs payable; both in the specific currency “c”.

If a price adjustment factor is applied to payments made in a currency other than the currency of the source of the index for a particular indexed input, a correction factor Z_o/Z_n will be applied to the respective component factor of p_n for the formula of the relevant currency. Z_o is the number of units of Kenya Shillings of the index, equivalent to one unit of the currency payment on the date of the base index, and Z_n is the corresponding number of such currency units on the date of the current index.

6.6.2 If the value of the index is changed after it has been used in a calculation, the calculation shall be corrected and an adjustment made in the next payment certificate. The index value shall be deemed to take account to fall changes in cost due to fluctuations in costs.

The notice shall be given as soon as practicable, and not later than 28 days after the Contractor became aware, or should have become aware, of the event or circumstance.

The Contractor shall permit the Project Manager to inspect all these records, and shall (if instructed) submit copies to the Project Manager.

8.1.5 Within 42 days after the Contractor became aware (or should have become aware) of the event or circumstance giving rise to the claim, or within such other period as may be proposed by the Contractor and approved by the Project Manager, the Contractor shall send to the Project Manager a fully detailed claim which includes full supporting particulars of the basis of the claim and of the extension of time and /or additional payment claimed. If the event or circumstance giving rise to the claim has a continuing effect:

8.1.8 Each Payment Certificate shall include such additional payment for any claim as has been reasonably substantiated as due under the relevant provision of the Contract. 8.1.10 The requirements of this Sub-Clause are in addition to those of any other Sub-Clause which may apply to a claim. If the Contractor fails to comply with this or another Sub-Clause in relation to any claim, any extension of time and/or additional payment shall take account of the extent (if any) to which the failure has prevented or prejudiced proper investigation of the claim, unless the claim is excluded under the second paragraph of this Sub- Clause.

8.5.4 Provided that no arbitration proceedings shall be commenced on any claim or dispute where notice of a claim or dispute has not been given by the applying party within ninety days of the occurrence

or discovery of the matter or issue giving rise to the dispute.

8.5.5 Notwithstanding the issue of a notice as stated above, the arbitration of such a claim or dispute shall not commence unless an attempt has in the first instance been made by the parties to settle such claim or dispute amicably with or without the assistance of third parties. Proof of such attempt shall be required.

8.5.6 The Arbitrator shall, without prejudice to the generality of his powers, have powers to direct such measurements, computations, tests or valuations as may in his opinion be desirable in order to determine the rights of the parties and assess and award any sums which ought to have been the subject of or included in any certificate.

8.5.7 The Arbitrator shall, without prejudice to the generality of his powers, have powers to open up, review and revise any certificate, opinion, decision, requirement or notice and to determine all matters in dispute which shall be submitted to him in the same manner as if no such certificate, opinion, decision requirement or notice had been given.

8.5.8 The award of such Arbitrator shall be final and binding upon the parties.
