23. Public Opening of Financial

Proposals 23.1 Unsuccessful Proposals

After the technical evaluation is completed, the Procuring Entity shall notify those Consultants whose Proposals were considered non-responsive to the RFP and TOR or did not meet the minimum qualifying technical score, advising them the following: (i) their Proposal was not responsive to the RFP and TOR or did not meet the minimum qualifying technical score;(ii)provide information relating to the Consultant's overall technical score, as well as scores obtained for each criterion and sub-criterion; (iii) their Financial Proposals will be returned unopened after completing the selection process and Contract signing; and (iv) notify them of the date, time and location of the public opening of the Financial Proposals and invite them to attend.

23.2 Financial Proposals for QBS, CQS and SSS

Only the Financial Proposal of the technically top-ranked Consultant is opened by the opening committee. All other Financial Proposals shall be returned unopened after the Contract negotiations are successfully concluded and the Contract is signed with the successful Consultant.

When the selection is based on the SSS method and if the invited Consultant meets the minimum technical score required passing, the financial proposal shall be opened and the Consultant invited to negotiate the contract.

23.3 Financial Proposals for QCBS, FBS, LCS

Following the ranking of the Technical Proposals, and after internal approvals, the Procuring Entity shall simultaneously notify in writing those Consultants whose Proposals were considered responsive to the RFP and TOR, and that have achieved the minimum qualifying technical score, advising them the following: (i) their Proposal was responsive to the RFP and TOR and met the minimum qualifying technical score; (ii) provide information relating to the Consultant's overall technical score, as well as scores obtained for each criterion and sub-criterion;(iii) their Financial Proposal will be opened at the public opening of Financial Proposals; and (iv) notify them of the date, time and location of the public opening and invite them for the opening of the Financial Proposals.

The Consultant's attendance at the opening of the Financial Proposals (in person, or online if such option is indicated in the Data Sheet) is optional and is at the Consultant's choice.

The Financial Proposals shall be opened publicly by the Procuring Entity's opening committee in the presence of the representatives of the Consultants and anyone else who chooses to attend. Any interested party who wishes to attend this public opening should contact the Procuring Entity as indicated in the Data Sheet. At the opening, the names of the Consultants, and the overall technical scores, including the break-down by criterion, shall be read aloud. The Financial Proposals will then be inspected to confirm that they have remained sealed and unopened. These Financial Proposals shall be then opened, and the total prices read aloud and recorded. Copies of the record shall be sent to all Consultants who submitted Proposals.

24. Correction of Errors

24.1 Activities and items described in the Technical Proposal but not priced in the Financial Proposal, shall be assumed to be included in the prices of other activities or items, and no corrections are made to the Financial Proposal.

24.2 Time-Based Contracts-If a Time-Based contract form is included in the RFP, in case of discrepancy between (i) a partial amount(sub-total) and the total amount, or (ii)between the amount derived by multiplication of unit price with quantity and the total price, or (iii) between figures and words, the later will prevail. In case of discrepancy between the Technical and Financial Proposals in indicating quantities of input, the Technical Proposal prevails and the Procuring Entity's evaluation committee shall correct the quantification indicated in the Financial Proposal so as to make it consistent with that indicated in the Technical Proposal, apply the relevant unit price included in the Financial Proposal to the corrected quantity, and correct the total Proposal cost.

24.3 Lump-Sum Contracts - If a Lump-Sum contract form is included in the RFP, the Consultant is deemed to have included all prices in the Financial Proposal, so neither arithmetical correction nor price adjustments shall be made. The total price, net of taxes understood as per ITC 24 below, specified in the Financial Proposal (Form FIN-1) shall be considered as the offered price.

25. Taxes

25.1 Subject to ITC 24.2, all taxes are deemed to be included in the Consultant's financial proposal as separate items, and, therefore, considered in the evaluation.

25.2 All local identifiable taxes levied on the contract in voices (such as sales tax, VAT, excise tax, or any similar taxes or levies) and in come and withholding tax payable to Kenya on the remuneration of non-resident Experts for the services rendered in Kenya are dealt with in accordance with the instructions in the Data Sheet.

26.1 For the evaluation purposes, prices shall be converted to a single currency using the selling rates of exchange, source and date indicated in the Data Sheet.

27. Abnormally Low Prices

27.1 An Abnormally Low Price is one where the financial price, in combination with other constituent elements of the proposal, appears unreasonably low to the extent that the price raises material concerns with the Procuring Entity as to the capability of the Consulting firm to perform the Contract for the offered price.

27.2 In the event of identification of a potentially Abnormally Low Price by the evaluation committee, the Procuring Entity shall seek written clarification from the firm, including a detailed price analyses of its price in relation to the subject matter of the contract, scope, delivery schedule, allocation of risk sand responsibilities and any other requirements of the RFP document.

27.3 After evaluation of the price analyses, if the Procuring Entity determines that the firm has failed to demonstrate its capability to perform the contract for the offered price, the Procuring Entity shall reject the firm's proposal.

28. Abnormally High Prices

28.1 An abnormally high price is one where the proposal price, in combination with other constituent elements of the proposal, appears unreasonably too high to the extent that the Procuring Entity is concerned that it (the Procuring Entity) may not be getting value for money or it may be paying too high a price for the contract compared with market prices or that genuine competition between Consultants is compromised.

28.2 In case of an abnormally high tender price, the Procuring Entity shall make a survey of the market prices, check if the estimated cost of the contract is correct, and review the RFP to check if the specifications, TOR, scope of work and conditions of contract are contributory to the abnormally high proposals. The Procuring Entity may also seek written clarification from the Consultants on the reason or the high proposal price. The Procuring Entity shall proceed as follows:

i) If the proposal price is abnormally high based on wrong estimated cost of the contract, the Procuring Entity may accept or not accept the proposal depending on the Procuring Entity's budget considerations.

ii) If specifications, TOR, scope of work and/or conditions of contract are contributory to the abnormally high proposal prices, the Procuring Entity shall reject all proposals and may re-invite for proposals for the contract based on revised estimates, specifications, TOR, scope of work and conditions of contract.

28.3 If the Procuring Entity determines that the Proposal Price is abnormally too high because genuine competition between Consultants is compromised (*often due to collusion, corruption or other manipulations*), the

Procuring Entity shall reject all Proposals and shall institute or cause competent Government Agencies to institute an investigation on the cause of the compromise, before re-inviting for proposals.

29. Combined Quality and Cost Evaluation

a. Quality and Cost Based Selection (QCBS) Method

29.2 In the case of FBS, those Proposals that exceed the budget indicated in ITC 14.1.4 of the Data Sheet shall be rejected. The Contract shall not be signed earlier than the expiry of the Standstill Period. This period shall be allowed for aggrieved Consultants to lodge an appeal. These discussions shall not substantially alter the original scope of services under the TOR or the terms of the contract, lest the quality of the final product, its price, or the relevance of the initial evaluation be affected.

32.6 Financial negotiations

The financial negotiations include the clarification of the Consultant's tax liability in Kenya and how it should be reflected in the Contract. All applicable taxes shall be itemized separately and included in the contract price.

32.7 If the selection method included cost as a factor in the evaluation (that is QCBS, FBS, LCS), the unit rates and the total price stated in the Financial Proposal for a Lump-Sum contract shall not be negotiated.

32.8 Where QBS or CQS methods was used for a *Lump-sum Contract* as indicated in the RFP, the unit rates negotiations shall not take place, except when the offered Key Experts and Non-Key Experts' remuneration rates aremuchhigherthanthetypicallychargedratesbyconsultantsinsimilarcontractsortheprofessionalpractice. The Procuring Entity will invite the next-ranked Consultant to negotiate a Contract. Once the Procuring Entity commences negotiations with the next-ranked Consultant, the Procuring Entity shall not reopen the earlier negotiations.

34. Letter of Award

34.1 Upon expiry of the Standstill Period, specified in ITC 28.1, after satisfactorily addressing any appeal that has been filed within the Standstill Period, and upon successful negotiations, the Procuring Entity shall send a Letter of Award to the successful Consultant. SECTION 5. TERMS OF REFERENCE

TERMS OF REFERENCE

Consultancy Services for Geotechnical Investigation, Foundation Recommendations and Surface Water Flood, Drainage and Scour Assessment for the Proposed Upgrading of Ganze Health Facility, Ganze, Kilifi County.

1. Background

The County Government of Kilifi intends to undertake the upgrading of Ganze Health Facility in Ganze, Kilifi County. The proposed development requires an assessment of the site's subsurface conditions and surface water characteristics to inform the safe, durable and technically appropriate design of the planned infrastructure.

The suitability of the ground for the proposed development must be established through a systematic geotechnical investigation. This will include determining the soil and subsurface profiles, groundwater conditions where encountered, engineering properties of the soils, and their capacity to support the proposed structures. The findings will inform foundation selection, foundation depth, allowable bearing pressure, settlement considerations and any necessary ground improvement measures.

The consultancy will also assess the site's exposure to surface water flooding, inadequate drainage, soil erosion and scour. Particular attention will be given to site topography, natural drainage paths, runoff entering the site, water accumulation and the potential for flowing water to undermine foundations or other infrastructure.

The investigation shall be appropriate to the proposed health facility development and its anticipated structural loads. Where the preliminary assessment identifies significant flood risks, complex ground conditions or inadequate drainage capacity, the consultant shall identify and recommend any additional investigations required before the detailed designs are finalised.

2. Objective of the consultancy

The overall objective is to establish the geotechnical and surface water conditions at the proposed development site and provide engineering recommendations to inform the design and construction of the upgraded Ganze Health Facility.

The specific objectives are to:

1. Determine the nature, sequence and engineering characteristics of the soil and underlying geological formations at the proposed development site.
2. Establish the suitability of the ground to support the proposed structures and determine the appropriate foundation options.
3. Determine the relevant soil-bearing capacity, settlement characteristics and other geotechnical design parameters.
4. Establish groundwater conditions, where encountered, and assess their implications for excavation, foundation construction and long-term structural performance.
5. Assess the site's susceptibility to surface water flooding, waterlogging, erosion and scour.
6. Assess existing drainage paths and the adequacy of the site's drainage arrangements in relation to the proposed development.
7. Recommend appropriate foundation, earthworks, drainage and erosion-control measures.
8. Provide site-specific technical reports, laboratory results, and recommendations to support the subsequent construction process.

3. Scope of services

The consultant shall undertake the following activities.

3.1 Task 1: Inception and review of project information

The consultant shall:

- Hold an inception meeting with the County Government of Kilifi and the designated project representatives.
- Review the available architectural layouts, proposed building footprints, preliminary structural information, site plans and topographical survey.
- Review available geological maps, previous ground investigation records, site drainage information and other relevant technical documentation.
- Undertake a preliminary site reconnaissance to identify the proposed building locations, site access, existing structures, ground conditions, visible drainage features and potential investigation constraints.
- Prepare an inception report setting out the proposed investigation methodology, investigation locations, testing programme, equipment, personnel, quality assurance measures and work schedule.

The investigation programme shall be proportionate to the proposed structures and the variability of the site conditions. The consultant shall justify the number, location and depth of investigation points based on the anticipated foundation loads, building footprint, ground conditions and applicable engineering standards.

3.2 Task 2: Geotechnical and foundation investigation

The consultant shall undertake field investigations to establish the soil profile and subsurface conditions across the proposed development area.

The activities shall include:

a) Site investigation and soil profiling

- Establish investigation points within the proposed building footprints and other locations relevant to the development.
- Conduct trial pits, boreholes or other appropriate subsurface investigations, as justified by the site conditions and proposed structures.
- Record soil strata, soil consistency or relative density, weathering, rock conditions where encountered, groundwater observations and other relevant field characteristics.
- Identify potential geotechnical hazards, including weak or compressible soils, uncontrolled fill, expansive or collapsible soils, erosion-prone materials and other conditions that may affect the proposed foundations.
- Record the depth and characteristics of competent founding strata where identified.

b) In-situ testing

Conduct appropriate in-situ tests to determine the engineering properties of the ground. Depending on the investigation method and soil conditions, these may include Standard Penetration Tests, dynamic probing, field density tests or other suitable tests.

The consultant shall state the testing methods and applicable standards and explain how the results will be used to establish the design parameters.

c) Soil and rock sampling

- Obtain representative disturbed and, where necessary, undisturbed soil samples.
- Obtain rock samples where relevant.
- Label, preserve, transport and document the samples in accordance with applicable testing standards.
- Maintain traceable records linking laboratory results to the corresponding investigation locations and depths.

d) Laboratory testing

Conduct laboratory tests appropriate to the soil types encountered and the requirements of the proposed structures. These may include:

- Natural moisture content.
- Particle-size distribution and grading.
- Atterberg limits.
- Soil classification.
- Bulk density and dry density.
- Compaction characteristics where relevant to earthworks.
- Shear strength and compressibility tests, where required for foundation design.
- Chemical tests for soil aggressiveness to concrete and buried infrastructure, including sulphates, chlorides or other relevant parameters where indicated by the ground conditions.
- Other tests necessary to characterise the subsurface materials and establish reliable engineering design parameters.

All testing shall be undertaken using recognised standards and by a suitably equipped laboratory with appropriate quality assurance procedures.

e) Groundwater assessment

The consultant shall record groundwater encountered during the investigation, including the depth and time of observation. Where groundwater conditions may materially affect the proposed works, the consultant shall recommend additional observations or monitoring as appropriate.

The assessment shall consider implications for excavations, foundation construction, drainage, durability and the stability of the proposed structures.

3.3 Task 3: Bearing capacity and foundation recommendations

Based on the field investigations, laboratory results and anticipated structural requirements, the consultant shall:

- Determine the relevant geotechnical design parameters for the proposed structures.

- Assess the allowable bearing pressure or other appropriate foundation design resistance, clearly stating the assumptions, calculation methods, safety factors and applicable design criteria.
- Evaluate the risk of total and differential settlement.
- Recommend suitable foundation types, such as isolated, strip, combined or raft foundations, where technically justified.
- Specify recommended founding depths and the conditions under which the recommendations apply.
- Identify unsuitable materials that may require removal, replacement, stabilisation or other ground improvement.
- Assess the need for engineered fill, compaction and ground preparation.
- Provide recommendations for excavation stability, temporary support and groundwater control where relevant.
- Identify geotechnical risks requiring further investigation or special design measures.

The report shall distinguish between measured test results, derived design parameters and engineering recommendations. Foundation recommendations shall be specific to the proposed structures and shall not rely solely on generic bearing-capacity values.
Required output: A geotechnical investigation report containing the ground profile, test results, calculations, foundation recommendations, limitations and supporting factual records.

3.4 Task 4: Surface water and flood-risk assessment

The consultant shall undertake a site-specific assessment of the potential for surface water flooding and waterlogging. The assessment shall include:

- Reviewing the available topographical survey to establish site levels, slopes and natural drainage directions.
- Inspecting the site for evidence of previous flooding, ponding, waterlogging, erosion and stormwater flowing onto or across the site.
- Identifying natural drainage channels, depressions, low-lying areas and nearby watercourses where present.
- Identifying the upstream catchment areas contributing runoff to the development site, to the extent reasonably required for the assessment.
- Assessing how the proposed development and changes in surface cover may affect runoff and drainage.
- Examining the potential for flooding or water accumulation to affect buildings, access routes, utilities, foundations and other infrastructure.
- Assessing the adequacy of the available information to determine whether a more detailed hydrological and hydraulic study is necessary.

The consultant shall provide a site-specific conclusion on the identified flood and surface-water risks, supported by field observations, survey information and calculations where required.
A detailed hydrological/hydraulic study shall be recommended where the preliminary assessment identifies substantial upstream runoff, a nearby watercourse with potential flood implications, low-lying terrain, material flood history or drainage capacity that cannot be established adequately through the basic assessment. Where required, the consultant shall specify the additional data, modelling and design work necessary.

3.5 Task 5: Drainage, erosion and scour assessment

The consultant shall assess the site's drainage arrangements and the risk of erosion or scour that could undermine the proposed structures.
The assessment shall:

- Identify existing drainage channels, overland flow routes, discharge points and areas of concentrated runoff.
- Examine the condition and apparent adequacy of existing drainage infrastructure.
- Identify locations susceptible to stagnant water, ponding, soil erosion, gullying or localised scour.
- Assess the implications of runoff concentration around building foundations, external works, access roads, retaining structures and drainage outfalls.
- Consider the likely effects of roof runoff, paved surfaces and other proposed impermeable areas on site drainage.
- Assess the need for surface drains, swales, lined channels, culverts, soakaways or other drainage interventions, subject to site suitability and applicable standards.

- Recommend appropriate erosion-control and scour-protection measures.
- Identify the need for safe drainage discharge arrangements and measures to avoid transferring drainage problems to adjoining properties or public infrastructure.

Where infiltration-based drainage measures are proposed, the consultant shall assess their suitability based on the soil conditions, groundwater levels, available space, contamination risks and proximity to foundations.
The consultant shall provide preliminary drainage recommendations and any supporting calculations necessary for the subsequent civil engineering design.

3.6 Task 6: Integrated engineering recommendations

The consultant shall consolidate the findings of the geotechnical, flood-risk and drainage assessments into a coordinated set of recommendations for the proposed development.
The recommendations shall address:

- Suitability of the site for the proposed development from a geotechnical and surface-water perspective.
- Foundation options and design parameters.
- Ground preparation, excavation and earthworks.
- Groundwater management, where relevant.
- Surface water drainage and safe discharge.
- Erosion and scour protection.
- Further investigations or specialist studies required before construction.
- Construction-stage inspections and verification tests needed to confirm that actual ground conditions correspond to the investigation findings.

The consultant shall clearly identify any assumptions, limitations, residual risks and design decisions that must be resolved by the structural or civil engineering design team.

3.7 Task 7: Presentation and finalisation of reports

The consultant shall present the preliminary findings to the County Government's designated technical team, respond to consolidated comments and incorporate the agreed corrections into the final reports.
The consultant shall ensure that the findings and recommendations are sufficiently clear and technically detailed to be used by the structural and civil engineers responsible for the proposed facility.
